

Practice Sheet 1.4: Basics of Python Programming

□ BASIC LEVEL — IF-ELSE (Exam-Ready)

1. Even or Odd Number

Problem Statement:

Write a Python program to check whether a given number is **even or odd**.

Input Format:

An integer number.

Output Format:

Print Even or Odd.

2. Positive, Negative or Zero

Problem Statement:

Write a Python program to check whether a given number is **positive, negative, or zero**.

Input Format:

An integer number.

Output Format:

Print Positive, Negative, or Zero.

3. Largest of Two Numbers

Problem Statement:

Write a Python program to find the **largest of two numbers**.

Input Format:

Two integers.

Output Format:

Print the largest number.

4. Eligible to Vote

Problem Statement:

Write a Python program to check whether a person is **eligible to vote**.

A person is eligible if $\text{age} \geq 18$.

Input Format:

Age (integer).

Output Format:

Print Eligible or Not Eligible.

5. Pass or Fail

Problem Statement:

Write a Python program to check whether a student has **passed or failed**.

A student passes if marks ≥ 40 .

Input Format:

Marks (integer).

Output Format:

Print Pass or Fail.

6. Check Leap Year

Problem Statement:

Write a Python program to check whether a given year is a **leap year**.

Input Format:

Year (integer).

Output Format:

Print Leap Year or Not a Leap Year.

7. Largest of Three Numbers

Problem Statement:

Write a Python program to find the **largest of three numbers** using if-else.

Input Format:

Three integers.

Output Format:

Print the largest number.

8. Check Divisibility

Problem Statement:

Write a Python program to check whether a number is **divisible by both 5 and 11**.

Input Format:

An integer number.

Output Format:

Print Divisible or Not Divisible.

9. Grade of a Student

Problem Statement:

Write a Python program to display the **grade of a student** based on marks:

- Marks $\geq 90 \rightarrow$ Grade A
- Marks $\geq 75 \rightarrow$ Grade B
- Marks $\geq 50 \rightarrow$ Grade C
- Else $\rightarrow$ Fail

Input Format:
Marks (integer).
Output Format:
Print the grade.

10. Check Character Type

Problem Statement:

Write a Python program to check whether a given character is a **vowel or consonant**.

Input Format:

A single character.

Output Format:

Print Vowel or Consonant.
